ABOUT ME

Unity Game Developer specializing in C# and gameplay systems, with experience developing mobile and PC games. Skilled in modular architecture, editor tooling, performance optimization, UI systems, and third-party service integration. Focused on writing clean, scalable, and maintainable code while delivering polished and reliable game experiences.

EXPERIENCE

Nilee Games, Intern Unity Developer

04/2026 - Present | Mumbai

- Developed and maintained motion-sensing games using Unity and C#, collaborating with Python developers for system integration.
- Performed game polishing and optimization to improve performance, stability, and overall player experience.
- Collaborated with designers and developers to implement features, resolve issues, and deliver project requirements.

PERSONAL PROJECTS

Arrow Flux – Hyper-Casual Puzzle Game

- Developed and published (Playstore) mobile puzzle game in Unity where players strategically clear directional arrows from a grid.
- Implemented core gameplay systems including grid management, level progression, power-ups, animations, and game state management.
- Built custom Unity Editor tools and level-generation workflows to efficiently create and manage 300+ levels just by taking images.
- Integrated monetization and platform services including Unity IAP, AdMob, Firebase Analytics, and Google Play Games Services.

City Café – Cozy Café Management Game

- Developed a PC café simulation where players manage orders, staff, and upgrades, creating a fun and addictive gameplay loop.
- Implemented customer AI using state machine architecture, in-game economy, shop, mission, and progression systems.
- Streamlined project workflow with editor tools and organized 100+ scripts for scalability.
- Technologies/Skills: Unity, C#, Game Systems, UI/UX Design, Audio Integration, Project Organization.

Echo Run – Fast-Paced Puzzle Platformer

- Created a time-based puzzle platformer challenging players to reach the goal before resets pull them back.
- Built responsive controls, level design, and gameplay balancing to maintain tension and reward skillful play.
- Optimized game feel through timing, animations, and subtle camera feedback.
- Emphasized iterative development to refine mechanics and enhance player engagement.
- Technologies/Skills: Unity, C#, Level Design, Gameplay Optimization, Animation, Game Balancing.

EDUCATION

Usha Pravin Gandhi, B.Sc.I.T.

04/2026 | Mumbai

SKILLS & TOOLS

Engines & Languages: Unity, C#, Java, C++, C, Python

Architecture: OOP, SOLID principles, design patterns (FSMs, Observer, Builder etc.)

Optimization & Debugging: Performance Optimization, Unity Profiler, Frame Debugger, Memory Optimization.

Unity & Tools: Unity Editor Tools, UI Toolkit, uGUI, Animation, Input System, Physics, ScriptableObjects

Packages & Services: DOTween, Cinemachine, Unity IAP, Firebase, AdMob, Google Play Games Services
